I would like to take this opportunity to thank everyone who has helped to make *Computational Visual Media* a success in its inaugural year of 2015. Their combined efforts have helped to ensure that all four issues for 2015 were published on schedule, before the end of the year. In particular, my thanks go to the authors, the reviewers, and the Editorial Board members, as well as the staff of Tsinghua University Press and Springer.

I also wish to share some further good news with you. It is my great pleasure to announce that Tsinghua University Press have agreed to sponsor an annual award for the best paper published each year in *Computational Visual Media*. After careful selection by the Editorial Board from amongst the 30 papers published in 2015, we are pleased to announce that the winner for 2015 is:

A unified framework for isotropic meshing based on narrow-band Euclidean distance transformation

Vol. 1, No. 3, September 2015, 239–251

Yuen-Shan Leung¹, Xiaoning Wang¹, Ying He¹, Yong-Jin Liu², and Charlie C. L. Wang³

¹Nanyang Technological University, Singapore

²Tsinghua University, China

³The Chinese University of Hong Kong, China

The Editorial Board, Tsinghua University Press and Springer offer their congratulations to the winners, who in addition to the prestige conferred upon them by the award, will also share a cash prize of US\$2000.

We look forward to receiving further excellent papers in 2016, and selecting next year's winners!
